Antimony in CAP 132V amendment

Current Reporting Limit requirement in GL contract : 0.2 ppm

Food items	Existing maximum permitted concentration (ppm)	Proposed maximum level (ML) (mg/kg, unless otherwise specified)	Portion of the commodity/product to which the proposed ML applies (The proposed ML applies to the edible portion if there is no specification)
Vegetables	1	1	Notes 1-8
Cereals	1	1	
Meat of animal	1	1	Applies to whole commodity (without bones). Also applies to fat from the meat.
Meat of poultry	1	1	Applies to whole commodity (without bones). Also applies to fat from the meat.
Fish	1	1	Applies to whole commodity after removing the digestive tract.
Crabs, prawns and shrimps	1	1	Applies to edible portion of the crab, including the liver and gonads or parts thereof after removal of shell.
Oysters	1	1	Applies to whole commodity after removal of shell.
Natural mineral waters (Note 9)	Not available (Note 10)	0.005 mg/L	
Bottled/packageged drinking waters (other than natural mineral waters) (Note 9)	Not available (Note 10)	0.02 mg/L	

Antimony in CAP 132V amendment

Note 1: Bulb/dry onions and garlic: refers to whole commodity after removal of roots and adhering soil and whatever parchment skin is easily detached.

Note 2: Head cabbages and kohlrabi: refers to whole commodity as marketed, after removal of obviously decomposed or withered leaves ; Cauliflower and broccoli: refers to flower heads (immature inflorescence only); Brussels sprouts: refers to “buttons” only.

Note 3: “Fruiting vegetables, Cucurbits ” and “Fruiting vegetables, other than Cucurbits ”: refers to whole commodity after removal of stems.

Note 4: Leafy vegetables (including Brassica leafy vegetables): refers to whole commodity as usually marketed, after removal of obviously decomposed or withered leaves.

Note 5: Legume vegetables: refers to whole commodity as consumed. The succulent forms may be consumed as whole pods or as the shelled product.

Note 6: Pulses: applicable to whole commodity

Note 7: Root and tuber vegetables: refers to whole commodity after removing tops and adhering soil (by rinsing in running water or by gentle brushing of the dry commodity) ; Potato: refers to peeled potato.

Note 8: Stalk and stem vegetables: refers to whole commodity as marketed after removal of obviously decomposed or withered leaves ; Rhubarb: refers to leaf stems only ; Globe artichoke: applies to flower head only ; Celery and asparagus: refers to the whole commodity after removing adhering soil.

CAP 132V amendment

Calculate the concentration of analytes in a food sample as follows:

$$M \text{ in mg/kg} = (A \times D \times V) / W$$

M = concentration of analyte in the sample, mg/kg

A = concentration of analyte in the sample solution, $\mu\text{g/L}$

D = dilution factor of the sample solution, if any

V = volume of sample solution made up after digestion, L

W = weight of the sample taken for analysis, g

e.g. $A \uparrow \Rightarrow M \uparrow$; $W \downarrow \Rightarrow M \uparrow$

Screening Strategy in Analysis

Arsenic

Commodity/Product Name	Maximum Level (ML) mg/kg	Portion of the Commodity/Product to which the ML applies	Notes/Remarks
Rice, polished	0.2	Whole commodity	The ML is for inorganic arsenic (As-in). Countries or importers may decide to use their own screening when applying the ML for As-in in rice by analysing total arsenic (As-tot) in rice. If the As-tot concentration is below or equal to the ML for As-in, no further testing is required and the sample is determined to be compliant with the ML. If the As-tot concentration is above the ML for As-in, follow-up testing shall be conducted to determine if the As-in concentration is above the ML.

Mercury

Commodity / Product Name	Maximum Level (ML) (mg/kg)	Portion of the Commodity/Product to which the ML Applies	Notes/Remarks
Tuna	1.2	Whole commodity fresh or frozen (in general after removing the digestive tract)	Countries or importers may decide to use their own screening when applying the ML for methylmercury in fish by analysing total mercury in fish. If the total mercury concentration is below or equal to the ML for methylmercury, no further testing is required and the sample is determined to be compliant with the ML. If the total mercury concentration is above the ML for methylmercury, follow-up testing shall be conducted to determine if the methylmercury concentration is above the ML. The ML also applies to fresh or frozen fish intended for further processing. Countries should consider developing nationally relevant consumer advice for women of childbearing age and young children to supplement the ML.
